DETAILED ACTION

1. Applicant's amendment dated May 2, 2008, responding to the third Office action mailed April 15, 2008 provided in the rejection of claims 1-3, 5-29, 31-55, and 57-78, wherein claims 1, 27, and 53 have been amended, claims.

Allowable Subject Matter

2. Claims 1-3, 5-29, 31-55, and 57-78 (renumbered as 1-75) are allowed.
3. The following is an examiner's statement of reasons for allowance:

As pointed out by Applicant(s), the prior art of record fails to teach and/or suggest "... dynamic installation and activation of software packages ... in a distributed network of nodes ...
storing ... a master node in the distributed network ... a plurality of software packages and a plurality of software modules ... contains ... one module and associated dependency information;
receiving a software update ... on said master node
storing the software update on said software package storage;
wherein said master node notifies said node that a software update is being requested;
wherein said master node passes said node identities of one or more software packages to be updated and module dependencies;
wherein in said node determines, using the module dependencies and before installing the software update, running processes on said node that will be affected by the software update.", as recited in independent claim 1 and similarly recited in independent

claims 27 and 53. (See amendment dated May 2, 2008, page 22, first full paragraph through page 23, first full paragraph; page 24, last paragraph through page 25, first paragraph)

The thinking behind this unique and inventive aspect is that a method for dynamic installation and activation of software packages in a distributed networking device; a master node provides a software package data that contains software packages for all nodes; it notifies a node that a software update is being requested, which examines the package identifiers and the dependencies and determines the running processes that will be affected by the update; hence, it allows for the installation of operating software components onto a node during runtime without requiring the node to perform a restart or reboot sequence (e.g., See page 1, Abstract and page 4, paragraphs [0011] and [0012] in the specification)

4. Claims 2-3, 5-26, 28-29, 31-52, 54-55, and 57-78 are considered allowable by virtue of their dependence on allowable independent claims 1, 27, and 53, respectively.
5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
